Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Problem Statements Table

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	System Security Administrator	Restrict record visibility dynamically so users only see records matching their branch field value (e.g., EEE branch).	Standard static role-based access controls grant access to all records regardless of field values.	Default ACLs evaluate static user roles rather than evaluating dynamic record field conditions at runtime.	Anxious about unauthorized users viewing sensitive confidential or branch-specific records.
PS-2	Compliance & Data Auditor	Enforce strict CRUD governance (Create, Read, Write, Delete) based on user roles and record status.	Users can modify or delete records they shouldn't have rights to edit or purge.	Access permissions are not granularly segmented across discrete operations (bb1–bb4 roles).	Frustrated by the lack of granular security control and policy compliance risks.
